Psydrax (Canthium)

\*Verbena aristigera

## Comments

no idea which species  
no idea which species

No 100% sure it was dicotoma, but definitely Fimbristylis

Saw two different entities of this

On track to Kookibitta Camp when I went to collect the Chrysocephalum

Hooky grass  
Not on Hunter's plant list

Not on Hunter's plant list, probably *B. macra*

I am fairly sure about the species  
Swa on the way out on Friday  
Checked the seed heads I collected on the way out on Friday  
I had thoughtb this was a Senecio!

I think we had this one on the walk back from Kookibitta - that big multi branched thing  
AS id'd by several people on NSW native plant id fb page  
Perianth segments fused to near apex, but the fruit shape is a better fit for *D. carinata*  
I collected on the way out on Friday. I have had both these *Dysphanias* under the microscope.

I knowyou have this, but we found a lot on our way out!  
One of the native ones, but I have no idea which one!  
on thbe way back from the Dungeon  
Saw this down by the bottom of MacIntyre Falls.  
now *Glandularia aristigera*

I collected on the way out on Friday
